

WORKBOOK ASSIGNMENT-4

QUESTION1

Questions: Q1) Create a MySQL database named CollegeDB and create the following tables:

-- Create Database

```
CREATE DATABASE SeniorCollegeDB;
```

```
USE SeniorCollegeDB;
```

-- Create Student Table

```
CREATE TABLE Student (  
    StudentID INT PRIMARY KEY,  
    StudentName VARCHAR(50),  
    City VARCHAR(30)  
);
```

-- Create Course Table

```
CREATE TABLE Course (  
    CourseID INT PRIMARY KEY,  
    CourseName VARCHAR(50),  
    Fees DECIMAL(10,2)  
);
```

-- Create Enrollment Table

```
CREATE TABLE Enrollment (  
    EnrollmentID INT PRIMARY KEY,  
    StudentID INT,  
    CourseID INT,
```

EnrollmentDate DATE,
 FOREIGN KEY (StudentID) REFERENCES Student(StudentID),
 FOREIGN KEY (CourseID) REFERENCES Course(CourseID)
);

QUESTION2

Q2) Insert at least 6 records into the Student table, 4 records into the Course table, and 5 records into the Enrollment table. Make sure:

Requirement
At least one student should not have enrollment
At least one course should not have any enrolled student

-- Insert into Student table

INSERT INTO Student VALUES

(1, 'Alice', 'NY'),
 (2, 'Bob', 'LA'),
 (3, 'Charlie', 'SF'),
 (4, 'Dave', 'CHI'),
 (5, 'Eve', 'MIA'),
 (6, 'Frank', 'SEA');

-- Insert into Course table

INSERT INTO Course VALUES

```
(101, 'Math', 500.00),
(102, 'Science', 600.00),
(103, 'Art', 300.00),
(104, 'History', 400.00);
```

-- Insert into Enrollment table

INSERT INTO Enrollment VALUES

```
(1001, 1, 101, '2023-01-01'),
(1002, 2, 101, '2023-01-02'),
(1003, 3, 102, '2023-01-03'),
(1004, 4, 103, '2023-01-04'),
(1005, 5, 103, '2023-01-05');
```

QUESTION3

Q3) Write a MySQL query using INNER JOIN to display students who have enrolled in courses. The output should include:

Column
StudentID
StudentName
CourseID
EnrollmentDate

SELECT Student. StudentID,

Student. StudentName,

```

Enrollment. CourseID,
Enrollment. EnrollmentDate
FROM Student
INNER JOIN Enrollment ON
Student. StudentID =
Enrollment. StudentID;

```

QUESTION4

Q4) Write a MySQL query to display student name, city, course name, fees, and enrollment date using multiple tables. Use:

Tables Required
Student
Course
Enrollment

```

SELECT Student. StudentName,
student. city,
Course. CourseName,
Course. Fees,
Enrollment. EnrollmentDate
FROM Student
JOIN Enrollment ON
Student. StudentID =

```

Enrollment. StudentID
 JOIN Course ON Enrollment. CourseID
 = Course. CourseID;

The screenshot shows the phpMyAdmin interface. On the left is a sidebar with a database tree. The main panel is titled 'Server: 127.0.0.1' and 'Database: seniorcollegedb'. It contains a SQL query editor with the following query:

```
SELECT Student. StudentName, student. city, Course. CourseName, Course. Fees, Enrollment. Enrollm
ON Student. StudentID = Enrollment. StudentID JOIN Course ON Enrollment. CourseID = Course. Cours
```

Below the query editor, there are options for 'Show all', 'Number of rows: 25', 'Filter rows: Search this table', and 'Sort by key: None'. The query results are displayed in a table with the following data:

StudentName	city	CourseName	Fees	EnrollmentDate
Alice	NY	Math	500.00	2023-01-01
Bob	LA	Math	500.00	2023-01-02
Charlie	SF	Science	600.00	2023-01-03
Dave	CHI	Art	300.00	2023-01-04
Eve	MIA	Art	300.00	2023-01-05

At the bottom, there are options for 'Show all', 'Number of rows: 25', 'Filter rows: Search this table', and 'Sort by key: None'. Below the table, there is a 'Query results operations' section with buttons for 'Print', 'Copy to clipboard', 'Export', 'Display chart', and 'Create view'.

QUESTIONS

Q5) Write a MySQL query using LEFT JOIN to display all students, including those who have not enrolled in any course. The output should include:

Column
StudentID
StudentName
City
CourseID
EnrollmentDate

SELECT Student. StudentID,
 Student. StudentName,
 Student. City,
 Enrollment. CourseID,
 Enrollment. EnrollmentDate
 FROM
 Student
 LEFT JOIN Enrollment
 ON Student.StudentID = Enrollment.StudentID;

Server: 127.0.0.1 » Database: seniorcollegedb

Enrollment ON Student.StudentID = Enrollment.StudentID;

☐ Profiling [Edit inline] [Edit] [Explain SQL] [Create PHP code] [Refresh]

☐ Show all | Number of rows: 25 | Filter rows: Search this table | Sort by key: None

Extra options

StudentID	StudentName	City	CourseID	EnrollmentDate
1	Alice	NY	101	2023-01-01
2	Bob	LA	101	2023-01-02
3	Charlie	SF	102	2023-01-03
4	Dave	CHI	103	2023-01-04
5	Eve	MIA	103	2023-01-05
6	Frank	SEA	NULL	NULL

☐ Show all | Number of rows: 25 | Filter rows: Search this table | Sort by key: None

QUESTION6

Q6) Write a MySQL query using RIGHT JOIN to display all courses, including courses that have no enrolled students. The output should include:

Column
StudentName
CourseID
CourseName
Fees

```

SELECT Student.StudentName,
Course. CourseID,
Course. CourseName,
Course. Fees
FROM Student
JOIN Enrollment ON
Student.StudentID = Enrollment.StudentID
RIGHT JOIN Course ON
Enrollment. CourseID = Course. CourseID;

```
